

Procedure for the Management of COVID-19

Glossary:

Bubble: anyone in the same bubble(s) as the person in question at school and in other settings. This will include anyone who has had regular and/or prolonged contact with the person.

Household: anyone who lives in the same house as the person in question, including their support bubble.

HPT: Health protection teams (HPT) provide specialist public health advice and operational support to NHS, local authorities and other agencies.

Suspected case: anyone displaying any of the following symptoms:

A high temperature – this means you feel hot to touch on your chest or back and/or have a temperature of 38C or more

A new, continuous cough – this means coughing a lot for more than an hour, or 3 or more coughing episodes in 24 hours (if you usually have a cough, it may be worse than usual)

A loss or change to your sense of smell or taste – this means you've noticed you cannot smell or taste anything, or things smell or taste different to normal

If your child is unwell:

If your child is unwell for any reason, please consult with school before sending them in. We can then make a decision together about whether they can come into school or should have a COVID-19 test before returning.

If your child has been given Calpol or other pain relief before coming to school, please inform us of the reason.

This procedure has been written in consultation with advice from Public Health England and guidance from Department for Education. It is correct following current guidance at the time of publishing and will be updated to follow any changes in guidance.

If there are confirmed cases of COVID-19 within our school community, this procedure will be reviewed and a stricter procedure of isolation may be followed for a period of time in order to prevent the spread of infection.
